

Maybury offers open and closed racking units in a wide variety of sizes and capacities. We have the flexibility to provide top-quality storage for both simple and sophisticated storage systems.

Bulk Storage Rack

Scotland Rack manufactures rugged, dependable bulk storage rack for your material storage needs. Our upright frames are constructed of 2" wide steel posts, with keystone slots for deck adjustment on 2" centers. Rugged spreaders and diagonals assure absolute rigidity. Beams have a formed front edge for easy sliding on and off, and a 5/8" step recess positions decking flush with the top of the beam. Deck supports drop into the beam web at two points to eliminate beam twisting under load and to prevent accidental beam disengagement.

- Natural tan finish on medium density fiberboard and gray enamel on steel parts
- Shipped knocked down for easy bolted assembly
- All posts are marked every 6" for easy beam placement
- Safety locking deck supports assemble easily without bolts

Choose from these Bulk Storage Rack models:

- Complete 8' high units with medium density fiberboard (MDF) decks
- Complete 8' high units with corrugated steel decks
- Complete 8' high units with open decks with 2 or 4 deck supports

...or create your own custom configurations.

Adding decks of differing lengths and upright frames of the same depth can result in many varied rows of shelving. Only one frame is needed between sections in a row.

Boltless Steel Edge Shelving

Boltless steel-edge shelving from Scotland Rack is an economical solution for material storage. This shelving features a patented all-steel snap-together construction system.

Medium density fiberboard (MDF) center panel prevents the "oil can" effect common to steel shelves. Small boxes will stay upright without tipping, and rounded steel edges provide ease when sliding materials on and off. Shelves adjust on 2" centers without loose clips or bolts.

- Only one frame is needed between sections in a row
- Available in 3' to 12' high sections, in 24" to 60" lengths, and 12" to 36" depths
- Plastic footplates and top caps included for all posts.
- Natural tan finish on medium density fiberboard and gray enamel on steel parts

Maybury offers open and closed racking units in a wide variety of sizes and capacities. We have the flexibility to provide top-quality storage for both simple and sophisticated storage systems.

Rivet Lock Shelving

Heavy-Duty Rivet Lock Units

Rivet lock shelving bridges the gap between steel edge and bulk rack. On rivet lock shelves, beams quickly snap into place on 2" centers into keyhole slots in posts. Rugged heavy-duty beams use a double rivet design for added strength and rigidity. Deck supports for double rivet beams attach to beams with one bolt on either end of the support and provide superior protection from deck sag. All components are formed from 16 gauge steel with a tough grey baked enamel finish. Decks are made from furniture grade, smooth, nonsplintering medium density fiberboard (MDF) which provides a smooth surface for sliding material on and off.

- Complete Units 5', 6', 7' or 8' high
- Double rivet connection on all perimeter supports for greater strength and rigidity
- Easy assembly without tools
- File box storage shelving for storage of standard file boxes

Light-Duty Rivet Lock Units

Our light-duty rivet lock shelving units require absolutely no bolts. Everything snaps together for rapid tool-free assembly. Our unique design provides a rounded steel edge for sliding material on and off while protecting the MDF decking. Angle posts hold MDF decking in place to provide the most uninterrupted usable storage area. Tie units together with post tie plates for increased strength and uniform spacing at less cost than tee posts.

- Rugged baked enamel finish
- Complete Units 5', 6' or 7' high
- Single rivet connection holds up to 675 lbs.
- Easy assembly without tools
