

*Maybury offers open and closed racking units in a wide variety of sizes and capacities. We have the flexibility to provide top-quality storage for both simple and sophisticated storage systems.*

The Carton Flow Authority

## Roller Rack Storage System

RollerRack is the newest carton flow product from Unex. It integrates the concept of traditional flow rack with the superior flow of full width roller track and builds in a proprietary beam that is "Span-Track Ready". The final result is an easy-to-assemble (no hardware or tools required) complete carton flow unit. For stand-alone carton flow applications there is no better value on the market today.

- Easy to assemble and reconfigure – no hardware or tools needed
- Unique 'hanger beam' has hangers built in (patent pending)
- Complete carton flow package: uprights, beams and track
- Slotted uprights have keystone design for quick assembly
- Boltless beams fit into upright slots
- Built-in hangers firmly position track, preventing left/right track shifting
- Row spacers connect uprights for longer runs and deeper bays

## Span-Track Storage System

Plastic roller wheels can be expensive to maintain and replace. Downtime is a problem. Unex Span Track eliminates the problem by eliminating the wheels and replacing them with ultra-reliable, rugged-duty aluminum rollers. This eliminates the high cost of replacing damaged plastic wheel tracks. Add to that the versatility of being able to change a single shelf in a single bay of pallet rack into flow storage, and you can configure a reliable flow module "on the fly" that will last many years.

Patented Span-Track can be added to any new or existing pallet rack for reliable carton support and flow. Turn static storage into live storage while maximizing space and worker efficiency. Span-Track comes in a variety of models:

**Low-Profile Span-Track** nests between front and rear beams allowing full use of vertical space in each level of rack.

**Span-Track 3D** has a low profile with a 3" deep side channel for increased load capacity over longer, unsupported spans.

**High-Profile Span-Track** installs on pallet rack beams. Sections can extend beyond front and rear of rack for a contoured profile.

**Deck Span-Track** sections sit on front and rear beams for the absolute easiest "drop-in" installation for single-deep racks.

*Maybury offers open and closed racking units in a wide variety of sizes and capacities. We have the flexibility to provide top-quality storage for both simple and sophisticated storage systems.*

The Carton Flow Authority

## Flow Cell Storage System

Flow Cells are complete track and rack units offering a modular approach to building your own workstation. The "mix & match" components make it easy to create ergonomic stations ideal for picking, assembly or line side storage. Posts and beams create the Flow Cell structure. One worker with one tool completes the set-up. No-nonsense design for quick assembly.

## Shelf Track Storage System

ShelfTRACK carton flow is the original full-width-roller track that replaces existing "plastic wheel" track systems without sacrificing your investment in rack structure and shelving. "Drop-In" design makes for fast, easy installation in your flow rack shelves. Plastic wheels come out. ShelfTRACK drops in. Once installed, maintenance expense is virtually eliminated.

- Retrofits existing shelves
- Plastic wheel maintenance eliminated
- Reslotting is a much easier process than with plastic wheel lanes
- Track length available "to-the-inch" to fit your rack and shelf depth
- Load capacity is determined by the capacity of your shelf
- Sections can be spliced end-to-end for longer runs
- 1" per foot pitch is recommended
